

INTRODUCTION

# DAT DANG NGUYEN

# AI EXPERTISE SHOWCASE

Specializing in Multi-Agent Systems, Natural Language Processing, Computer Vision,  
and Large Language Models to deliver innovative AI solutions.

Building the Future with AI

DAT DANG NGUYEN

# INVOICE PAYMENT OPTIMIZATION AGENT

Automating and optimizing invoice payment workflows using AI-powered agent coordination, decision-making algorithms, and real-time data processing. Built with Python, multi-agent frameworks, and NLP for intelligent invoice data extraction.

Course Highlight – Project Overview

DAT DANG NGUYEN

# SKILLS & TOOLS MASTERED

## NLP Document Parsing

Proficient in natural language processing techniques for document parsing, text extraction, and semantic understanding using spaCy and transformers.

## Computer Vision

Skilled in computer vision fundamentals for data recognition tasks, image processing, and visual analysis in manufacturing and healthcare contexts.

## Large Language Models

Experienced in working with LLMs for contextual understanding, intelligent assistants, and advanced text generation applications.

## NLP Libraries ↗

Proficient with industry-standard NLP tools including spaCy for entity recognition and Hugging Face transformers for state-of-the-art language models.

## Multi-Agent Systems

Expert in designing and implementing multi-agent systems for complex coordination tasks, decision-making algorithms, and autonomous agent behaviors.

## Python & ML Frameworks

Strong foundation in Python programming with hands-on experience in TensorFlow and PyTorch for building and training machine learning models.

DAT DANG NGUYEN

# REAL-WORLD APPLICATIONS

## ➤ Finance & Accounting

Automate financial and accounting processes including invoice handling, payment optimization, and financial data extraction using AI-powered workflows.

## ➤ Customer Service

Enhance customer service with intelligent NLP chatbots that understand context, provide accurate responses, and improve user satisfaction across platforms.

## ➤ Healthcare & Manufacturing

Improve visual data analysis in manufacturing quality control and healthcare diagnostics through Computer Vision and intelligent image recognition systems.

DAT DANG NGUYEN

# THANK YOU

Thank you for your time. I would be delighted to connect and discuss how my AI expertise can contribute to your team's success.
